# 2020: A New Year Blog and Fault-Tolerant Series

What do you see or think about when viewing 2020?

- Will it just indicate the year for the next 360+ days\*?
- Maybe we are thinking about the 2020 hindsight concept or reflection of doing something, anything better the next time.
- Perhaps we recall a memory of vision checks when one targets the “20 line” of an eye chart, striving for laser like focus.

For Me - The 2020 Series of Insight Posts will encompass design discussions using power conversion equipment in 20 squared deployments. That's what I see, a 20 squared (**20<sup>2</sup>**) mathematical formula. Having two of the 20s arranged in architectures to make an overall power support system fault-tolerant. A laser focus 20<sup>2</sup> design could be the elimination of the largest possible failure points, if not all, or at least mitigating the majority of single-point failures.

Sharing the focused “20 line” vision of other known deployments, may help you rethink or pre-think a design for the critical operation in your network going forward into the New Year 2020. Want to talk about your 2020 thoughts in power, give me a call.

Samuel; Chief Operating Officer and a 20<sup>2</sup> Technical Power Blogger

P.S. (*Dry Engineer Humor Warning*) - \*Here's the math:  $20^2 = 366$ ; It's a Leap Year!
